

# Open BlackBerry Integration for Secure Access to Business Critical Information. 100% Wireless.

## BA introduces BlackBerry®

BlackBerry and BA work together to develop open source solutions that consists of smartphones integrated with software that enables access to email and other company communication and business information services, such as shared calendaring, secure intranet, private extranet, ERP and CRM systems.

## What is Open BlackBerry Integration?

BlackBerry solutions give mobile users access to their company email, calendar, data, applications and internet information services from a smartphone. All BA integrated solutions are customized to meet the needs of one person or an entire enterprise, to any scale, in any technology.

BlackBerry is much more than email push. Combining the power of BlackBerry and the open source middleware of BA allows you to get more out of your BlackBerry devices and BlackBerry Enterprise Server licenses, by providing you with fast, secure and wireless access to your business critical information and online systems.

## Why Open BlackBerry Integration from BA?

BA helps you to safely access your business intranet systems, providing you with a wireless extension of your business critical information, including document libraries, pricing information, billing and ordering systems, discussion boards, support forums & FAQ, operational dashboards, monitoring systems, company calendar, customer relationship tools, resource planning and much more...

BA has a laser sharp focus on open source software, systems and standards. BA has built up a solid client base in the last 12 years, having served hundreds of customers with more cost effective IT solutions, infrastructure, collaboration and messaging platforms and security solutions.

## How does it work?

BA's Open BlackBerry Integration for Web (OBI4web) supports access to all web enabled business applications and company intranet sites via single sign-on (SSO).

Within hours BA provides you with access to your secure information and your online business systems from your BlackBerry via a single sign-on. Your user has direct access to all of his online applications via the BlackBerry log-in.

All data send and receive over-the-air (OTA) is scrambled and secured via a VPN tunnel; and is logged for reporting and security auditing purposes. Administrators can create permissions and restrictions for OTA access to secure information.

## About BlackBerry Enterprise Server

The BlackBerry Enterprise Solution provides push-based access to email; calendar, contacts, tasks and notes; instant messaging; web-based applications and services and enterprise applications.

## About Research in Motion - RIM

Research in Motion's BlackBerry smartphone allows you to stay in touch with everything that matters to you while you're on the go with a BlackBerry. Email, phone, maps, organizer, applications, games, the Internet and more.

## About BA

BA offers IT consulting, integration solutions and support services for large enterprises and small businesses. The company employs ten open source and Linux experts delivering integrated business applications, collaboration systems and secure managed infrastructure based on open source and Linux.
